Town of Bridgewater

Inflow Reduction Program – Dominion Street

Issue 1 **May 2012**

Construction Overview

The Town of Bridgewater is beginning the construction of the installation of a new sanitary sewer that will travel the entire length of Dominion Street, the existing combined sewer (sanitary and storm) will become a storm only sewer (rainwater). As part of the construction, connections to the side streets between King Street and High Street will also be made in this construction zone. The area of construction between King Street and High Street should start on June 4th at King Street and travel to High Street. The work will take between 5 to 7 months pending how well the rock breaks, the condition of the existing pipes (water and combined sewer) that will need to be worked around and the possible unknown/abandoned buried infrastructure or utilities that may be encountered.

The purpose of the work is to separate the storm or rain water from the combined sewer, as all water that enters the combined sewer system requires treatment at the Town of Bridgewater Sewage Treatment Plant.

What to Expect

Dust, noise and heavy equipment are common elements of construction. We are committed to providing a work site that is safe and orderly. The work will include street closures and restricted driveway access in the areas of construction. Temporary disruptions to services should be minimal and we will work with adjacent property owners to minimize any inconvenience. Temporary water shutdowns to home and business owners should be anticipated, as much notice as possible will be provided. Garbage and Green Cart collection will remain unchanged. Every effort will be made to minimize the disruption to residents in order to complete the work.

Town Hall Meeting – Council Chambers

June 4, 2012, commencing at 6:00pm, all interested residents and adjacent property owners are invited to attend. The Design Consultant and Town of Bridgewater Engineering Department will be there to provide information and answer questions regarding the proposed construction.

Construction Work Hours

Working hours are generally 7:00am to 7:00pm. It should be noted that with approval from the Town Engineer the contractor may work longer hours and weekends if required to complete the work.

Special Needs

Individuals with special needs who may be uniquely impacted by this project should contact the engineer in charge as soon as possible to make them aware of your situation. We will work with you in an attempt to minimize your inconvenience as much as possible.

If you have any questions during the construction of the proposed work, please feel free to contact one of the persons listed below.❖
