

# Insects Found in Woodland Gardens Pond

Insects are perfectly adapted to the aquatic environment. Some species are entirely aquatic, while other insects only live in the water during their larval stages or as nymphs. When insects undergo a metamorphosis, the immature form is called **larva**. When they gradually transform into the adult form, the young stages are called **nymphs**.

## Larva

Caddisfly Larva

Dronefly Larva

Mosquito Larva

## Nymphs

Alderfly Nymph

Stonefly Nymph

Mayfly Nymph

Water Beetle Larva

Adult Water Beetle

## Anthropods

Water Fleas

Water Mites
